

# ChartTools

## Discharge Accelerator

### Technology

Web-based, Platform independent means nothing to install & universal availability. This accommodates multi-site practices with floating physicians.

Integrated with Dragon Naturally Speaking Professional Medical version 9

No training needed

Lookup lists and menu choices selections pulled directly from practice management system. No need to maintain two systems

Electronic Signature

Leading Edge foundation - AJAX and PHP

HIPAA compliant. Full audit trail and Change tracking

Integrated with our the *hcAccelerator Suite* of industry leading solutions

### At last, a system that lets you tell the story

**The Problem** Occupational Medicine practices struggle to grow business while minimizing staff hours. Employers & payers reject and downcode claims lacking clear, structured documentation. This results in lost revenue and rework. Physicians and staff are buried in repetitive work and struggle to comply with new regulations and custom employer requirements. Transcription is expensive, inaccurate, and difficult to change and lacks instant availability.

**Unacceptable risk** EMR users suffer from *Click-Fatigue*, having to click through tens of menus to complete the documentation process. Resulting documentation fails to capture the case story, leaving the practice open to unnecessary risk.

**ChartTools Solution** developed to provide a solution for medical chart dictation and patient discharge instructions and education. This system allows for free form dictation of medical chart notes usually in combination with a comprehensive set of templates and educational files that can be individualized by diagnosis and medical condition as well as by provider specialty and style.

### Benefits

- **Improve Employer Relations** built-in consistency ensures employer requirements are met every encounter.
- **Streamline workflow** eliminate pre-printed forms, post-visit-chart abstraction, transcription delays
- **Increased Revenue** from coding accuracy, improved charge capture, reduced down coding & rejections
- **Cost reduction** eliminate transcription, reduced data entry & billing re-work

Will *ChartTools* work for you?

If you are a busy multi-site practice looking to expand while controlling costs, come talk to us.

## Satisfied Doctors:

“Using *the ChartTools* is simple and intuitive. I can quickly document complex cases in almost the same time it takes to call in a dictation. Dragon is amazingly accurate and the result is immediately available within Systoc. I love it.” – Milt Dupuy MD, Medical Director Business Health Services, Practicing Occ Med Physician since 1989

## Ease of use ...

“Once installed, it took me approximately 2 hours to be up and running, dictating medical charts. I have not had to use the phone system since that time. I enjoy the option of seeing the dictation as I dictate. This allows me to make corrections or clarify as I go along. It also allows me to look back and see if I have already dictated some information that would be essential and saved me re-dictating the same information over and over.

I find the system makes very few errors. The use of macros also helps to speed the dictations.” Joe Valle MD. Practicing Occ Med physician since 1975

## Successful Administrators

“Working with Healthcare Data Solutions has been great. They understand our business and the need for SIMPLE, RELIABLE, MONEY-SAVING tools. We saved over \$150,000 the first year.” –Joe Hymes, Executive Director, Business Health Services

## How *ChartTools* works

- Physicians choose from a list of cases displayed on their secure Website. A color-coded screen tells them which cases are awaiting documentation.
- Streamlined Discharge allows rapid selection of diagnosis, discharge instructions, work restrictions, return-to-work status & date, stamping of treating physician signature.
- Discharge report is printed. Patient electronically signs.
- Charge Capture minimizes staff time and lost charges, maximizes revenue.
- Completing the story. Discharge info is pulled into the transcription report that is then completed with an optimized version of Dragon Naturally Speaking using pre-formatted templates. Once completed, they submit the information directly into the practice database where it is available for viewing or reporting.
- Streamlined patient discharge with electronic signature is fast and intuitive. This feature saves staff and physician time, and increasing employer and patient satisfaction. No Abode forms required. Slash 90% of transcription costs in weeks.
